Description

Broadband dielectric spectroscopy (BDS) is a powerful experimental technique permitting to investigate the molecular dynamics of polar (and nonpolar) materials over a wide frequency range covering up to 16 decades, at different temperatures and pressures.

BDS finds an incredibly large number of applications in different fields of science and technology. The technique has, in fact, been successfully employed in studies on:

- molecular dynamics of liquids, liquid crystals, glasses, polymers and other disordered systems;
- charge transport in ionic glasses and liquids, semiconductors, organic crystals, ceramics, polymers;
- interfacial phenomena and confinement effects;
- non-linear electrical effects. BDS is also a very useful tool to monitor chemical reactions and phase transitions, e.g. crystallization, irreversible adsorption, tautomerization, etc.

Organizing committee:

Chairs:

Ranko Richert (Arizona State University-ASU)

Catalin Gainaru (Fakultät Physik, Technische Universität Dortmund)

Silvina Cerveny Murcia (Centro de Física de Materiales CSIC-UPV/EHU)

Objectives

Considering the multidisciplinary approach and the broad set of applications of broadband dielectric spectroscopy, this meeting is open also to researchers outside of the dielectric community whose research could start new synergies at both experimental and theoretical level.

Course specific contributors

Directed by

Silvina Cervený Murcia

Centro de Física de Materiales CSIC-UPV/EHU

Teachers

Karolina Adrjanowicz Adrjanowicz

University of Silesia

Simone Capaccioli

Koji Fukao

Tina Hecksher

Malgorzata Jasiurkowska-Dealporte

Airat Khamzin

Mohamed Kolmangadi

Larisa Latypova Latypova

Daniel E. Martinez-Tong

University of the Basque Country

Philipp Münzner

Florian Pabst

Birte Riechers

Erik Thoms

Michael Vogel
