Organising Committee

Description

Employees can contribute to the energy transition of their companies by participating in the renewable energy installation project that they undertake, by supporting its financing and participating in the economic benefits derived from it.

The research presents an innovative legal-financial figure that entails a greater link between people and organizations, with a responsible investment proposal, so that people who do not yet practice self-consumption know it firsthand, thanks to an investment that can return profitability.

Objectives

Encourage the involvement of employees in sustainability.

Analysis of the different self-consumption models contemplated in our legislation.

Technical-economic and legal study of a pilot project specifically designed for a company associated to ASLE.

Organised by

The logo for ASLE, with 'as' in black and 'LE' in red.
