Academic Validity

10 hours

Description

This training activity, targeted at professionals who care for patients in end-of-life contexts, aims to provide those professionals with resources to be able to face these terminal situations in patients, facilitating the management of the end-of-life process and protecting dignity of the patient. In this initial course, in addition to the physiological processes that take place in this situation, the psychological and spiritual aspects of the protagonists present in this process: patient, family and professionals, will be discussed.

The program aims to contribute to the training, education and accreditation of professionals who are dedicated to palliative care, participating in the solid development of the personnel involved.

Objectives

Understand the end-of-life process from a bio-psycho-socio-spiritual perspective.

Know and train to treat the symptoms present in end-of-life situations.

Learn effective communication strategies at the end of life with the patient and their family, in order to achieve effective decision-making and support.

Organised by
