Azalpena

"SYMPOSIUM [Greek: συμπόσιον] = a convivial meeting, usually following a dinner, for drinking and intellectual conversation"

Since its beginning in 2010 in Valencia, the CπC symposium series has kept its original spirit of a convivial meeting of European scientists working on π-conjugated molecular systems. In few words, it is a young, affordable, short and small event with space for open and stimulating friendly discussions. More on the CπC spirit at the CπC society website.

The topics covered range from small π-conjugated molecules to large supramolecular systems, as well as computational approaches from empirical force fields up to high-level quantum chemistry techniques.

This year we will gather in beautiful Donostia to perpetuate this nice tradition on the 8th and 9th of February 2024!

Helburuak

The aim is to offer an informal forum for the discussion of the latest research results in the domain of π-conjugated systems.

Ikastaroaren laguntzaile espezifikoa

[Logos of DIPC, insilibio, and Springer]
After previous research experience in Belgium, Australia and France, Claire Tonnelé is now an Ikerbasque Research Fellow at the DIPC. Her research activity lies in the study of organic (functional) systems for application in organic electronics from a computational perspective with the central aims of establishing structure-property relationships and obtain a comprehensive picture of the underlying photophysical processes, in close connection with experimental investigations.
