Description

This workshop is part of the **European Meeting on Ancient Ceramics (EMAC 2025)**, an international conference to be held in **Bilbao** from **September 10 to 12, 2025**, preceded by a Summer School on **September 8 and 9**. The event will bring together experts in **archaeology, archaeometry, and applied sciences** to present research on ancient ceramic technology, production, provenance, and conservation. Key topics include studies on raw materials, trade networks, organic residue analysis, experimental archaeology, and the development of portable non-destructive analytical techniques such as Raman spectroscopy, FTIR, and pXRF. Advanced digital methodologies, including artificial intelligence, 3D photogrammetry, and big data studies, will also be featured.

Objectifs

To promote an interdisciplinary approach to ancient ceramic studies by integrating archaeological theories with cutting-edge technologies.

To explore and discuss innovations in raw material analysis, sustainability in ceramic conservation, and chronological techniques.

To train early-career researchers through **practical workshops**, contributing to the advancement of analytical tools for the preservation of archaeological heritage.
